xViz®
ADVANCED VISUALS

PROJECT MANAGEMENT

✦ PBI Certified

#1 Gantt Chart in 📊 Power BI

Effortlessly visualize, track, analyze and manage project status, tasks and progress

Why our Gantt is #1 in AppSource

- Multi-level timeline
- Connectors
- Advanced alerting techniques using conditional formatting
- Resource Gantt
- Planned bars
- Milestones with extensive flexibility

Why top enterprises choose xViz Gantt

- Comprehensive visualization
- Scalable for large projects
- Seamless integration with Power BI

Performance Flow   ✧ PBI Certified

Dynamically link people, places, and entities to KPIs in a single view with Ⅴ Visio-like charts and shapes

Key use cases

Process flow/ Swim lanes

Organizational performance

Financial performance analysis
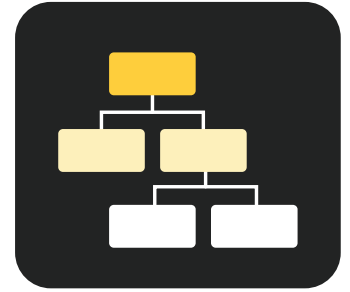

Sales performance analysis

Feature key highlights

Swim lanes	Link	Tabs	Alerting	Details view
Scoreboard	Layouts and orientation	Notes	Predefined templates	

> Performance flow has allowed us to completely digitize the data and automatically generate, hi-quality, informative visuals showing 7 different dimensions of the financial supply chain. In addition, linking to metrics, KPIs and trend data is supported within the visual. By embedding into Power BI, access management and workflow processes are managed seamlessly within the end-to-end solution over a user base > 100. Performance flow is highly configurable and we were able to quickly tailor the look and feel to what our business users required. While the solution is great for supply chain data, we are seeing a great number of additional data areas where Performance flow can be applied.

Andrew Gundrum,
Director, Financial Data & Analytics
